

HQB Biodegradable Degreaser

Description

HQB (Heavy Duty Quick Break Degreaser) is a liquid degreaser / precision cleaning product specifically formulated to cut through built up grease, oil, dirt, bitumen etc. With three high performance surfactants coupled with a new generation grease cutter / lifter to hold grease, oil and soils in solution during cleaning and rinsing time. This equals fast cleaning and no redepositing allowing HQB to go into oil (water separators) and have oil break from solution. All Raw Materials contained in HQB are biodegradable and meets or exceeds current VOC requirements.

Directions for use

Apply diluted HQB Degreaser to surfaces to be cleaned and allow time to work. Do not allow solution to dry. Agitation may be required on stubborn stains. Rinse off HQB Degreaser and contaminants with good water pressure. Emulsions formed in the rinse water will "break" quickly, allowing hydrocarbons to be removed from the surface of the rinse water with coalescing plate separators or other suitable recovery system. For engines and metallic surfaces, dilute with water 1:10 for cold machines, 1:20 for hot machines. For very dirty surfaces increase strength as required. Always test in an inconspicuous place
